TAYLOR'S UNIVERSITY

Wisdom · Integrity · Excellence

SCHOOL OF COMPUTER SCIENCE
BACHELOR OF SOFTWARE ENGINEERING

GROUP ASSIGNMENT

CSC62604 / CSC61204 Software Construction

SDG 11 — Sustainable Cities and Communities Software System

MODULE NAME	Software Construction
MODULE CODE	CSC62604 / CSC61204
MODULE LEADER	Dr. Reema Bin Thabit
ASSESSMENT	Group Assignment · 30% · 100 marks
LEARNING OUTCOME	MLO2
DUE DATE	Week 11, 1st December 2026

GROUP MEMBERS

No.	Name	Student ID	Signature
1	Melvin Chia Pin Wen	0383080	
2	Wu Zhuofei	0384209	
3	Cheng Jun Hao	0383484	
4	Danial Abir	0374873	

GROUP NAME	**Group 01**
SCENARIO SELECTED (1–5)	**5 — Urban Air Quality and Green Space Monitor**
GITHUB REPOSITORY URL	https://github.com/melvinchia3636/sc-assignment

Contents

1 Introduction and SDG 11 Context . . . 3
1.1 Urban Problem and Operating Organisation . . . 3
1.2 SDG 11 Target Alignment . . . 3
1.3 Stakeholders and Their Needs . . . 3
1.4 Scope and Expected Users . . . 3
2 Literature Review . . . 4
2.1 Existing Smart-City Solutions and the Gap . . . 4
2.2 Design Patterns and Prior Applications . . . 4
2.3 Java Technologies . . . 4
2.4 Evidence of the Urban Problem . . . 4
3 System Design and Modelling . . . 5
3.1 Architecture Overview . . . 5
3.2 UML Class Diagram . . . 5
3.3 Design Pattern Justification . . . 5
3.4 CRC Cards . . . 5
4 Implementation and Unit Testing . . . 6
4.1 Core Logic and Clean Code . . . 6
4.2 Unit Test Suite . . . 6
4.3 Coverage and Known Limitations . . . 6
5 Integration and Application . . . 7
5.1 GUI and MVC . . . 7
5.2 External API Integration . . . 7
5.3 System Integration Testing . . . 7
6 Reflection and SDG 11 Alignment . . . 8
6.1 SDG 11 Impact . . . 8
6.2 Architectural Trade-offs . . . 8
6.3 Scalability . . . 8
6.4 Teamwork . . . 8
7 References and Appendices . . . 9
7.1 References . . . 9
Appendix A: Unit Test Report . . . 9
Appendix B: AI Use Declaration . . . 9

1 Introduction and SDG 11 Context

1.1 Urban Problem and Operating Organisation

1.2 SDG 11 Target Alignment

1.3 Stakeholders and Their Needs

1.4 Scope and Expected Users

2 Literature Review

2.1 Existing Smart-City Solutions and the Gap

2.2 Design Patterns and Prior Applications

2.3 Java Technologies

2.4 Evidence of the Urban Problem

3 System Design and Modelling

3.1 Architecture Overview

3.2 UML Class Diagram

3.3 Design Pattern Justification

3.4 CRC Cards

4 Implementation and Unit Testing

4.1 Core Logic and Clean Code

4.2 Unit Test Suite

4.3 Coverage and Known Limitations

5 Integration and Application

5.1 GUI and MVC

5.2 External API Integration

5.3 System Integration Testing

6 Reflection and SDG 11 Alignment

6.1 SDG 11 Impact

6.2 Architectural Trade-offs

6.3 Scalability

6.4 Teamwork

7 References and Appendices

7.1 References

Appendix A: Unit Test Report

Appendix B: AI Use Declaration
